## Hypothetical Strategy Average Annual Total Return vs. S&P 500 Index (12/31/00 - 12/31/05)

Year	Strategy	S&P 500 Index
5-Year	11.40%	0.55%
3-Year	23.61%	14.39%
1-Year	12.20%	4.91%

Source: Compustat Database

Average annual total return measures the change in the value of an investment assuming reinvestment of all dividends and capital gains and payment of applicable Trust expenses and sales charges. Average annual total returns are for the periods noted through 12/31/05. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. Although the Trust seeks to achieve better performance than the S&P 500 Index, there can be no assurance that the Trust will achieve better performance over any investment period in the Trust or over rollover periods, if available.

reflects Trust sales charges (full sales charge in first year of 2.95% and reduced rollover charge thereafter of 1.95%) and expenses but not brokerage commissions on stocks or taxes. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the Trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. Returns are calculated by taking year-end prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends (in the case of total returns) received for the period divided by starting price. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

All strategy performance is hypothetical (not any actual trust) and Standard and Poor's 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the index. The Trust will not try to replicate the performance of the index and will not necessarily invest any substantial portion of its assets in securities in the index. There is no guarantee that the perceived intrinsic value of a security will be realized. Securities in which the Trust invests may differ from those in the index. It is not possible to invest directly in the S&P 500 Index.

# Light Green Advisors Environmental Leadership Portfolio

## Investment Objective & Principal Investment Strategy

The Trust seeks to maximize total return primarily through capital appreciation. The Trust's investment strategy uses a quantitative selection process to determine the constituents of the final portfolio. Stocks are selected from a defined universe of stocks included in the Eco\*Index™. The Eco\*Index™ is an index of large cap companies compiled by Light Green Advisors, LLC ("LGA") based upon an analysis of environmental performance trends of publicly traded companies relative to their industry peers.

## The Competitive Advantage of Environmental Leadership

The Trust contains approximately 40 domestic securities involved in the energy, utilities, materials, industrials or health care sectors. LGA believes that environmental leadership firms may have a competitive advantage due to their ability to reduce energy and material costs, lower susceptibility to management distraction due to penalties for environmental infractions, and generate profitability advantages from comparatively lower carbon footprints<sup>1</sup> than their industry peers.

As energy prices rise due to a combination of geopolitical instability, higher production costs, depleted reserves, and the impact of environmental regulations to address challenges such

as climate change, LGA believes the competitive advantages from more efficient use of energy and materials by environmental leadership firms will become increasingly important. However, please be aware that despite the potential for energy prices to impact firms in energy-intensive sectors, it is possible that energy prices may fall and that the portfolio of firms in the Trust may decline in value. It is also possible that environmental leadership firms may not perform as well as other companies in the applicable sectors.

<sup>1</sup>The "carbon footprint" of a firm is the sum of Intergovernmental Panel on Climate Change recognized greenhouse gas emissions resulting from the firm's operations. Companies operating in the five sectors of the Trust that are active in Europe are subject to mandatory greenhouse gas emission limits, and several states within the United States have already adopted legislation to regulate greenhouse gas emissions from companies in energy-intensive sectors such as those that are included in the Trust.

## Light Green Advisors, LLC

Based in Seattle, Washington, Light Green Advisors, LLC is an asset management firm that has pioneered a "best in class" approach to environmental sustainability investing in the United States. LGA introduced the Environmental Leadership Trust™ in 1999 and the Eco\*Index™ in 2000. LGA has advised institutional investors such as the National Association of State Treasurers and the California State Teachers Retirement System on how to integrate environmental issues such as climate change into their investment strategies.

## Claymore Securities, Inc.

Claymore Securities, Inc. is a privately-held financial services company offering unique investment solutions for financial advisors and their valued clients. Claymore currently offers over 40 unit investment trusts in the following asset classes: equity, income, international and multi-asset portfolios.

## Important Risk Information

As with all investments, you can lose money by investing in this Trust. The Trust also might not perform as well as you expect. This can happen for reasons such as these: Stock prices can be volatile. The value of your investment may fall over time. Market value fluctuates in response to various factors. These can include stock market movements, purchases or sales of securities by the Trust, government policies, litigation, and changes in interest rates, inflation, the financial condition of the securities' issuer or even perceptions of the issuer.

The Trust invests in stocks issued by mid-capitalization companies. These stocks customarily involve more investment risk than stocks of larger capitalization companies. Mid-capitalization companies may have limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments.

The Trust invests in U.S. listed foreign securities. The Trust's investment in U.S. listed foreign securities presents additional risk. Securities of foreign issuers present risks beyond those of domestic securities. More specifically, foreign risk is the risk that foreign securities will be more volatile than U.S. securities due to such factors as adverse economic, currency, political, social or regulatory developments in a country, including government seizure of assets, excessive taxation, limitations on the use or transfer of assets, the lack of liquidity or regulatory controls with respect to certain industries or differing legal and/or accounting standards.

The Trust includes stocks issued by companies in the industrial sector. Industrial companies are affected by a number of factors including the general state of the economy, intense competition, domestic and international politics, excess capacity and spending trends.

The Trust includes securities issued by companies in the energy sector. Companies in the energy sector are subject to volatile fluctuations in price and supply of energy fuels, and can be impacted by international politics and conflicts, including the war in Iraq and hostilities in the Middle East, terrorist attacks, the success of exploration projects, reduced demand as a result of increases in energy efficiency and energy conservation, natural disasters, clean-up and litigation costs associated with environmental damage and extensive regulation.

The sponsor does not actively manage the portfolio. The Trust will generally hold, and may continue to buy, the same stocks even though the stock's outlook, market value or yield may have changed.

Inflation may decrease the value of money. Inflation may lead to a decrease in the value of assets or income from investments. Please see the Trust prospectus for more complete risk information.

## Hypothetical Strategy Growth of \$10,000 vs. S&P 500 Index (12/31/00 - 10/31/06)

Source: Compustat Database

The Growth of \$10,000 chart represents a hypothetical \$10,000 investment in the strategy (not any actual trust) and the S&P 500 Index from 12/31/00 through 10/31/06. The graph assumes the sum of the initial investment (\$10,000) and all dividends (including those on stocks trading ex-dividend as of the last day of the year) and appreciation during a year are reinvested at the end of that year. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. Although the Trust seeks to achieve better performance than the S&P 500 Index, there can be no assurance that the Trust will achieve better performance over any investment period in the Trust or over rollover periods, if available.

### Hypothetical Strategy Average Annual Total Return vs. S&P 500 Index (12/31/00-12/31/05)

Year	Strategy	S&P 500 Index
5-Year	11.40%	0.55%
3-Year	23.61%	14.39%
1-Year	12.20%	4.91%

Source: Compustat Database

Average annual total return measures the change in the value of an investment assuming reinvestment of all dividends and capital gains and payment of applicable Trust expenses and sales charges. Average annual total returns are for the periods noted through 12/31/05. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. Although the Trust seeks to achieve better performance than the S&P 500 Index, there can be no assurance that the Trust will achieve better performance over any investment period in the Trust or over rollover periods, if available.

### Hypothetical Strategy Annual Total Returns vs. S&P 500 Index

(Annual total returns are for the noted 1-year periods beginning 12/31 and ending 12/31 the following year.)\*\*

Year	Strategy	S&P 500 Index
2001	5.27%	-11.88%
2002	-14.61%	-22.10%
2003	37.56%	28.68%
2004	22.37%	10.88%
2005	13.38%	4.91%
As of 10/31/06	7.86%	12.06%

Source: Compustat Database, Zephyr StyleADVISOR

\*\*Total return measures change in the value of an investment assuming reinvestment of all dividends and capital gains. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. Although the Trust seeks to achieve better performance than the S&P 500 Index, there can be no assurance that the Trust will achieve better performance over any investment period in the Trust or over rollover periods, if available.

All strategy performance is hypothetical (not any actual trust) and reflects Trust sales charges (full sales charge in first year of 2.95% and reduced rollover charge thereafter of 1.95%) and expenses but not brokerage commissions on stocks or taxes. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. Returns are calculated by taking year-end prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends (in the case of total returns) received for the period divided by starting price. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

Standard and Poor's 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the index. The Trust will not try to replicate the performance of the index and will not necessarily invest any substantial portion of its assets in securities in the index. There is no guarantee that the perceived intrinsic value of a security will be realized. Securities in which the Trust invests may differ from those in the index. It is not possible to invest directly in the S&P 500 Index.

## Security Selection

To select the Trust portfolio, the sponsor starts with the constituent companies of the Eco\*Index™ as the initial universe. Eco\*Index™ is an index that has been developed and maintained by LGA since January 2000. Utilizing environment-related data provided by third parties including the Environmental Protection Agency and a proprietary calculation methodology known as E-Scores™\*, LGA tracks the performance of companies that are deemed to be environmentally responsible.

From those Eco\*Index™ constituents, only those stocks that meet the below criteria are selected:

- » Securities include only common stocks and American Depositary Receipts (“ADRs”) (Real Estate Investment Trusts are excluded);
- » Stocks that trade on the New York Stock Exchange, the American Stock Exchange, or the NASDAQ National Market;
- » Stocks whose price per share is greater than or equal to \$5.00; and
- » Stocks whose GICS Sector classification codes are 10 (Energy), 15 (Materials), 20 (Industrials), 35 (Health Care), or 55 (Utilities).

For those qualifying stocks, a “Book-to-Price” measure is compiled. Book-to-Price is defined as book value per share divided by price per share. The qualifying stocks are ranked within their GICS sector based on “Book-to-Price,” and those stocks with the highest Book-to-Price measure are selected.

\*E-Scores™ are developed from third-party data provided by the Environmental Protection Agency (EPA) and other environmental organizations evaluating: corporate expenses associated with compliance with U.S. environmental statutes, frequency and cost of corporate chemical and oil spills, toxic chemical releases to the environment and associated expenses, superfund and hazardous waste cleanup liabilities, and corporate waste generation costs and trends in costs savings generated by waste reduction.

## Sector & Capitalization Weightings

Breakdown is as of date of deposit.

Industrials	29.31%
Health Care	21.93%
Utilities	19.50%
Materials	14.64%
Energy	14.62%

Large-Cap	41.49%
Mid-Cap	58.51%

## Portfolio Details

### Portfolio Summary

Inception Date	November 14, 2006
Termination Date	February 6, 2008
Initial Offer Price	\$10.00
Minimum Investment	\$250.00
Number of Issues	41
Estimated Annual Income Distribution	\$0.1084
Distributions*, if any	Semiannually
CUSIP (cash payment)	18385F103
CUSIP (reinvestment accounts)	18385F111
CUSIP (fee-cash)	18385F129
CUSIP (fee-reinvest)	18385F137
Ticker	CLELAX

Distributions, if any, will be made semiannually commencing January 25, 2007.

\*Estimated annual income distributions will fluctuate due to unitholder redemptions as well as securities in the portfolio being sold or called prior to maturity. Distributions are also subject to the ability of issuers to make principal, interest and dividend payments in the future.

### Sales Charges

Sales charge (“S/C”) is based on a \$10 per unit offering price:

	Amount Per Unit	% of Offering Price
Initial S/C	\$0.100	1.00%
1st Yr Deferred S/C	\$0.145	1.45%
C&D Fee	\$0.050	0.50%
Total S/C	\$0.295	2.95%

The deferred sales charge will be deducted in monthly installments on the last business day of March through May of 2007, or upon early redemption.

For unit prices other than \$10, percentages of initial and deferred sales charges will vary. Early redemption of units will still cause payment of the deferred sales charge.

### Volume Discount Breakpoints

The following sales charges are as a % of the public offering purchase amount price.

Less than \$50,000	2.95%
\$50,000-\$99,999	2.70%
\$100,000-\$249,999	2.45%
\$250,000-\$499,000	2.20%
\$500,000-\$999,999	1.95%
\$1,000,000 or more	1.45%

## Strategy Historical Risk/Return vs. S&P 500 Index

(Annualized data for the approximately 6-year period 12/31/00 - 10/31/06)\*

Source: Compustat Database, Zephyr StyleADVISOR

\*Standard deviation is a statistical measurement that depicts how widely returns vary over a given period of time. The measurement is generally used to understand the range of returns that are most likely for a given investment. An investment with a high standard deviation indicates widely fluctuating performance, also known as high volatility.

All strategy performance is hypothetical (not any actual trust) and reflects Trust sales charges (full sales charge in first year of 2.95% and reduced rollover charge thereafter of 1.95%) and expenses but not brokerage commissions on stocks or taxes. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the Trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the index. Returns are calculated by taking year-end prices, subtracting them from the prices at the end of the following year (adjusting for any stock splits that might have occurred during the year) and adding dividends (in the case of total returns) received for the period divided by starting price. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions.

Standard and Poor's 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. It is not possible to invest directly in an index. The historical performance of the index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the index. The Trust will not try to replicate the performance of the index and will not necessarily invest any substantial portion of its assets in securities in the index. There is no guarantee that the perceived intrinsic value of a security will be realized. Securities in which the Trust invests may differ from those in the index. It is not possible to invest directly in the S&P 500 Index.

UITs are fixed and not actively managed. You can lose money by investing in the Trust. An investment in this fixed portfolio should be made with an understanding of the risks involved with owning common stocks. Industry predictions may not materialize and securities selected for the Trust may not participate in overall industry growth, if any. There is no guarantee that the portfolio will achieve its investment objective. The economic condition of the issuers of the securities in the portfolio as well as the stock market, in general, may worsen and therefore reduce the value of the units of the portfolio.

This UIT is a long-term strategy, and investors should consider their ability to invest in successive portfolios at the applicable sales charge, if available. There are tax consequences associated with an investment from one series to the next. Investors should consult their tax advisor to determine tax consequences associated with an investment from one portfolio to the next, if available. Units of the portfolio may be well suited for purchase by Individual Retirement Accounts or other qualified retirement plans. Consult your attorney or tax advisor regarding tax consequences associated with units held outside one of these tax-deferred vehicles. Claymore Securities, Inc. does not offer tax advice.

Investors should consider the investment objectives and policies, risk considerations, charges and ongoing expenses of the UIT carefully before investing. The prospectus contains this and other information relevant to an investment in the Trust. Please read the accompanying prospectus carefully before you invest or send money. If a free prospectus did not accompany this literature, please contact your securities representative or Claymore Securities, Inc., 2455 Corporate West Drive, Lisle, IL 60532, 800-345-7999.
